daisyUI   2.20.0

Config

How to change the default configuration of daisyUI?

daisyUI can be configured from your **tailwind.config.js** file. Default config:

```js
module.exports = {
  //...

  // add daisyUI plugin
  plugins: [require("daisyui")],

  // daisyUI config (optional)
  daisyui: {
    styled: true,
    themes: true,
    base: true,
    utils: true,
    logs: true,
    rtl: false,
    prefix: "",
    darkTheme: "dark",
  },
}
```

Config values explained:

- # styled

  Boolean (default: true)

  If it's true, components will have colors and style so you won't need to design anything. If
  it's false, components will have no color and no visual style so you can design your own
